Allowable Subject Matter

1. Claims 38-40 allowed.
2. Claims 6-31 and 33-37 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1, 2 and 32 rejected under 35 U.S.C. 103(a) as being unpatentable over Kato et al (2003/0183854) in view of Ueda (JP 04-279064) further in view of JP (5-190853)

Regarding Claims 1, 2 and 32, Kato et al. disclose a semiconductor device, method of manufacturing the same and method of designing the same where in Fig. 16a, P-channel TFT 501 has a different dimension than the N-channel TFT 502. Furthermore, the abstract section of Kato et al discloses that the semiconductor device is formed by laser crystallization. Kato et al. fail to disclose the two different channel thicknesses and the required physical makeup of polysilicon layer of two TFTs. However, Ueda discloses a display device where TFT 15 of display section and TFT 16 of driver circuit are manufactured at different processes and TFT15 has a smaller channel thickness than the channel of TFT16. Furthermore, JP 5-190873 discloses a display device where the

physical makeup of the polysilicon layer of the first TFT is different than the physical makeup of the second TFT.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required two channels with different thicknesses and the required physical makeup of the first and the second TFTs' polysilicon layers in Kato et al. as taught by Ueda and JP 5-190853, respectively, in order to have a liquid crystal display device with increased performance and reliability.

Regarding the last two paragraphs of this claim, examiner disregards the process parts since only the final product is relevant regardless of the process that is used to make the product, i.e., product by process.
